## Biochemist

Secure a place in the future of Biological Technology.

### **Zenith Environmental Research and Consulting**

is leading the way in new environmentally-sound technologies for application in industrial settings.

We are offering an entry level position to a recently graduated Biochemist. The person selected will be in the top ten of their graduating class with above average abilities in lab procedures. We need someone who can integrate quickly with our Product Development team and quickly assume responsibility for the complete biochemical analysis of plant and animal tissues. To identify residual toxins, contaminants, or evidence of organic change or damage in test samples to establish the quality and safety of new drugs, treatments, and agricultural chemicals will be your mission.

This is an exceptional opportunity for a highly responsible person with excellent lab technique and a commitment to thorough and careful work. We require a Bachelor of Science in Biochemistry with course specialization in Analysis, Pharmacology, Toxicology, or Nutrition. We can offer flexible hours to graduate students enrolled in part-time studies. Please include transcripts of your marks with your résumé.
