SPACECRAFT DESIGN ENGINEER

UNWIAS, in collaboration with its industrial partner, Dynacron Enterprises, has recently been selected by our national space agency to build a low-Earth-orbit microsatellite that will carry a specially built telescope.

Design Engineers will join a team of spacecraft designers who will be trained by AMSAT, a world-renowned organization that invented the art of building low cost spacecraft. The team will engage in the design, assembly, integration, and test of the satellite, gaining valuable hands-on experience available almost nowhere else in the world. Positions are available immediately.

We require a minimum of a Bachelor's Degree in Aerospace Engineering with relevant workterm experience and excellent references from professional associates.

This is an exceptional opportunity and only the very best need apply.

Forward résumés by courier to UNWIAS, New Westminster, clearly marked To the Attention of: Dr. Jesse Melvin, Space Flight Laboratory.
