

# BIOCHEMIST

Federal Health Protection Branch

The Federal Department of Health has initiated a major research project to assess the public health impact of feed additives, growth hormones, genetic engineering, and other production-enhancing technologies current and developing in modern agriculture.

Working under the direction of senior researchers, you will lead a team of technicians and technologists in conducting detailed and exhaustive biochemical analyses. You will be responsible for reviewing and summarizing the results of your section and for close collaboration with other section heads.

This is an extremely responsible position available only to an individual who has demonstrated a genuinely inquiring and disciplined approach to science.

The following qualifications are essential:

- A Master's Degree in Biochemistry with specialization in Analysis, Nutrition, or Toxicology
- At least five years relevant experience with proven outstanding ability in laboratory procedures.
- A broad general knowledge of modern agricultural bio-technologies
