Prospects. Sports clinics. Private Medical Clinics. Military off shore opportunities. Hospitals

Job Title

Radiology Technician

National Occupational Classification (NOC)

3215

Job Description

You decided to head back to school and further your education. You graduate with excellent marks as a MRI technician. The setting of work place does not change but your responsibility certainly has. Even better, you now have an assistant!

Your patients always feel at ease with you as you gently talked them through the procedure as you take the MRI scan. It is your job to make sure that you are up to date on all the correct procedures. Your coworkers and patients never need to worry because you never had to be told to do your homework.

Your first patient has been prepped and they are ready for the scan. With your expertise and skill you quickly perform the procedure. You look over the 3D scan of the patient's body to make sure the image came out clear. You have gone a long way from the kid who got excited about a dissection lab in biology.

Your job is to follow the specific instructions of the physician who needs the scan. If a specific organ needs to be looked at to diagnose you must find the perfect position to get the most effective picture. In between patients you are filling in charts and looking in on your assistant. You feel a sense of fulfillment when you clock out each day; knowing you helped people on their way to recovery.
