Job Title

Environmental Farm Plan Representative

National Occupational Classification (NOC)

2123

Job Description

Your day can start early when the everyday farmer of your town rises for the morning. You can be leading educational workshops or meeting with the farmers. Your job is to help the farmers reduce the amount of environmental impact they have while helping them to get the best out of their land. You help them with nutrient management and conservation of water, soil, and energy.

You start your day at the site meeting with the farmer and taking a look at the land. You sit down with them and conduct a plan on how to reduce green house gas emissions. You listen to his concerns and help to solve any problems that he has. He is satisfied with what the two of you have come up with and very glad you came to see him.

You run a workshop from home that educates the local farmers on new tactics to help save the environment and better help their farms. You hold it about once a month and usually see almost everyone there each time. The farmers love to come to these meetings because you are able to help them make sense out of everything and it is very beneficial to them. They always leave happy knowing you are there to help them out.

When your site visit is done you write up and collect invoices from previous visits. Your job has a lot to do with promotion. You want everyone to be on board with your projects and help to keep the earth green. Taking baby steps at a time you know you can really make a difference when it comes to saving the planet.
