Role Description

You graduated from high school with decent marks all-round, and doodles and designs drawn on everything you owned. Your **sociable nature** and **sense of style** kept you at the hub of school social life. You **designed crests and banners** for clubs and events, and were always on **decorating** committees with your two cents' worth on colour schemes. You used the school's main computer to work on the yearbook and enjoyed it so much you hardly even noticed you were acquiring **computer skills**.

In your final year of high school you won second place in a sticker design competition for the Stay in School Campaign. Your prize was a computer and a year's scholarship to study Graphic Arts. You studied theory at first—**colour, design, and composition**. Then you put the theories into practice, **painting, drawing and printing**. You especially loved **silkscreening**, an ancient process invented in Japan. It is still used today for fine art prints, signs and textiles. You printed extremely cool original designs on T-shirts for all your friends.

You found a part-time job as a Production Assistant in a sign shop and signed up at college for another year to study Computer Graphics. Your work at the shop was mostly priming plywood, spraying paint and cleaning equipment. You have learned a lot about **lettering** and **layout** from the old pros who have taken an interest in furthering your education. However, you have decided that you prefer design to production work and software programs to paintbrushes.

You have now worked at the sign shop full-time for a year. You doodle on your computer screen at night, and long for something more pleasing to the eye than real estate signs. You want a job where you can put your computer skills to work and **work as part of a team**. Your portfolio is ready to go—but where?

You are 21 years old.
