Role Description

You have a **practical, analytical** sort of mind and graduated from high school with above average marks in **math** because it made sense to you, and **science** because you liked learning how things work. You were considered essential personnel in the social scene because you could make sound equipment, cars and barbecues work. You could always be counted on to get a manual or get info on line as to how to fix or put together things. Ditto for bicycles and lawnmowers, so your family's tool kit was generally regarded as your department. You have a helpful nature and your calm, **logical** approach seems to work as well on people as on broken toasters.

You belonged to a Student Volunteer Corps that helped seniors and people with disabilities. You **fixed appliances** and rigged up neat contraptions to **solve unique problems** for people with disabilities. This experience landed you a part-time job in an appliance repair shop for the last year of school. You **learn fast** and were **good with customers**, so the owner took a liking to you and encouraged you to find a technical college where you could get some training to build on your obvious talents.

You enrolled in a two year college program in Industrial Instrumentation Service, where you **specialized in controlling instrumentation for manufacturing**. You liked the school—it was very hands-on and there was something interesting going on in every workshop. You picked up a lot of useful **general knowledge about manufacturing** just talking to other students in the cafeteria.

You could have stayed at the school longer and specialized more, but didn't want to take on any more student loans. Instead you decided to apprentice for two years as a Service Technician with a company that made puzzles and boardgames. Now that you have earned your trade certification you're looking for a better wage— and the games company is looking for a new apprentice.

You are 23 years old.
