Role Description

You graduated from high school with excellent grades in **math** and **science** and a reputation for leadership. A real people person, you enjoyed music and student council activities, worked on the school paper and instigated parties, discussions and **team projects** whenever possible. When a local business donated computers to your school, you were one of the first students to take a serious interest in the possibilities they presented.

You studied Computer Science at university while working part-time delivering pizzas on campus. You were interested in software design because design is a **team effort** and a creative challenge. You were also very good with **computers**. You knew it took excellent programming skills, too, so you specialized in **coding, programming, and debugging**, and spent one six month work term coding for the university's computer services department.

You started volunteering at the university radio station in your first year because that was where the music-lovers gathered. In your final year you became the Manager and earned a small wage. Your **organizational skills, initiative** and your **ability to resolve conflicts** and **keep things running smoothly** made you a natural. Your **computer skills** helped a lot with the **scheduling and accounting**.

When you graduated with a Bachelor's Degree in Computer Science one and a half years ago you were hired as a Programmer by a business software company. Their products interested you because of your experience as a manager, but your work was focused entirely on coding. You learned a lot about **how design and programming teams function—and malfunction!**

You've also realized that you would rather deal with the big picture rather than the details. Now you are looking for work that will put your computer training to work in a more people-oriented job.
