Role Description

While in high school you had excellent marks in the sciences, especially **chemistry**. One day your chemistry teacher showed the class Al Gore's movie "An Inconvenient Truth". You were shocked to see how badly we are hurting the earth. After this you became much more environmentally conscious and highly involved with the school's environment club.

You began encouraging others to be more aware of the pollution they were creating. You began to carpool with your friends to the movies on Friday nights, rather than each of you taking your own vehicles. Your parents were thankful of the fact that you lowered their electricity bill. You were always turning off lights and only using the air conditioning when absolutely needed.

Your community hours were worked with the Jazz fest concerts. You got to see all your favourite bands for free, and all you had to do was help collect the garbage. All the garbage is separated and recycled whenever possible. You worked along side people from the retirement plant, they helped you understand which materials were recyclable and why. Your commitment to the cause made you realize that you wanted to work with people who follow their heart.

You went to university to get your degree in chemical engineering. You also took a minor in environmental studies. You took all the regular engineering courses, chemistry courses and a few courses in environmental physics and biology. By the time you left university you were a few credits short but you knew that you wanted a job that was science related and could help the environment.

You are 23 years old.
