Role Description

When you graduated high school you had excellent marks in **math** and the sciences, you had the top marks in your class in **chemistry** and **biology**. You've always been very interested in foods; you love to know what ingredients mix together to make all the foods that you love. Even when you were little, you liked to read the labels on your cereal boxes at breakfast to ensure you were getting all your essential nutrients. When your parents brought you grocery shopping it always took longer than usual because you were trying to find the difference between the organic and non-organic apples.

In one of your high school science classes you were asked to take a label from one of your everyday foods and research the different food additives. You loved this project! You went above and beyond what was expected of you, you looked up all the ingredients and found their nutritional values. You knew then that a future in nutrition was right for you.

After graduation you went away to school and took your undergraduate's degree in science with a specification in Health and Nutritional Sciences. The work was challenging but you were always well rewarded for the hard work you put into your papers and assignments. One of your professors announced that he would be taking on a research assistant and would only be picking someone who is **intelligent, willing to work hard and can handle the responsibility**. You worked tirelessly to obtain this position and your professor was happy to have you on his research team.

You worked alongside your professor in his quest to determine the best combination of ingredients in baby food. It is very important that babies receive the proper nutrition and health benefits from their diet. After you graduated you had excellent marks and practical experience from the assistant job. Now you're ready to put your skills and knowledge to the test in the real world.

You are 23 years old.
